WNT \ Performance

Utensili di qualità premium per la massima performance.

Gli utensili di qualità premium della linea prodotti **WNT Performance** sono stati sviluppati per applicazioni speciali e sono caratterizzati da eccellenti prestazioni. Se nella vostra produzione avete massime esigenze in termini di prestazione e desiderate ottenere ottimi risultati, vi consigliamo gli utensili premium di questa linea prodotti.

WNT \ Standard

Utensili di qualità per applicazioni standard

Gli utensili di qualità della linea prodotti **WNT Standard** uniscono elevate prestazioni e affidabilità, caratteristiche molto apprezzate dai nostri clienti in tutto il mondo. Gli utensili di questa linea prodotti sono la scelta preferenziale per numerose applicazioni standard e garantiscono ottimi risultati.

I dati di taglio dipendono in grande misura dalle condizioni esterne, come ad es. dalla stabilità del fissaggio utensile e pezzo, dal materiale e dal tipo di macchina. I parametri indicati rappresentano dati di taglio possibili che vanno aumentati o ridotti a seconda dell'impiego.

Tipi di utensili

 <p>TruTap</p> 	<p>Maschi per fori passanti tipo TruTap</p> <ul style="list-style-type: none"> ▲ Per filetti passanti fino a 4xD ▲ Forma d'imbocco B: imbocco 3,5–5 filetti, senza imbocco corretto ▲ Scanalature dritte ▲ Idoneo anche per maschiatura rigida, con attacco Weldon, esecuzione extralunga e refrigerazione interna ▲ Grazie alla geometria particolare delle scanalature il truciolo viene evacuato in direzione del taglio 	 <p>TruTap DL</p> 	<p>Maschi per fori passanti tipo TruTap DL</p> <ul style="list-style-type: none"> ▲ Per filetti passanti fino a 4xD ▲ Forma d'imbocco D: imbocco 3,5–5 filetti, senza imbocco corretto ▲ Con elica sinistra di 15° ▲ Idoneo per acciaio, titanio e leghe di titanio e Inconel 718 ▲ I trucioli vengono evacuati nella direzione di taglio.
 <p>CavTap</p> 	<p>Maschi per fori ciechi tipo CavTap</p> <ul style="list-style-type: none"> ▲ Per filetti ciechi fino a 3xD ▲ Forma d'imbocco C: imbocco 2–3 filetti, senza imbocco corretto ▲ Forma d'imbocco E: imbocco 1,5–2 filetti, senza imbocco corretto ▲ (35°, 42°, 45°, 50°) con scanalature destre, ad elica forte torsione ▲ Idoneo anche per maschiatura rigida, con attacco Weldon, esecuzione extralunga e refrigerazione interna ▲ Grazie alla torsione estremamente accentuata delle eliche i trucioli vengono evacuati in sicurezza nella direzione opposta a quella di taglio 	 <p>CavTap SL</p> 	<p>Maschi per fori ciechi tipo CavTap SL</p> <ul style="list-style-type: none"> ▲ Per filetti ciechi fino a 2xD ▲ Forma d'imbocco C: imbocco 2–3 filetti, senza imbocco corretto ▲ Forma d'imbocco E: imbocco 1,5–2 filetti, senza imbocco corretto ▲ (15°, 25°, 30°) con scanalature destre, ad elica leggera ▲ Idoneo per acciaio, titanio, leghe di titanio e Inconel 718 ▲ Idoneo anche per maschiatura rigida, con esecuzione extralunga e refrigerazione interna ▲ Adatto anche per condizioni d'impiego difficili come fori trasversali
 <p>DuoTap</p> 	<p>Maschi per fori passanti e fori ciechi tipo DuoTap</p> <ul style="list-style-type: none"> ▲ Per filetti ciechi e passanti fino a 2xD ▲ Forma d'imbocco C: imbocco 2–3 filetti, senza imbocco corretto ▲ Forma d'imbocco D: imbocco 3,5–5 filetti, senza imbocco corretto ▲ Forma d'imbocco E: imbocco 1,5–2 filetti, senza imbocco corretto ▲ Scanalature dritte ▲ Per acciaio, materiali a truciolo corto e temprati fino a 55 (62) HRC ▲ Con esecuzione extralunga e refrigerazione interna 	 <p>DuoForm</p> 	<p>Maschi a rullare tipo DuoForm</p> <ul style="list-style-type: none"> ▲ Per filetti ciechi e passanti fino a 3xD ▲ Forma d'imbocco C: imbocco 2–3 filetti, senza imbocco corretto ▲ Per materiali adatti alla deformazione a freddo fino a 1400 N/mm² ▲ Idoneo anche per maschiatura rigida, con scanalature di lubrificazione e refrigerazione interna

Tipi di filetti

M	Filetto ISO metrico standard DIN 13	
MF	Filetto ISO metrico fine DIN 13	
G	Filetto Whitworth per tubi DIN EN ISO 228	
UNC	Filetto unificato grosso ASME B1.15 e ISO 3161	
UNF	Filetto unificato fine ASME B1.1	
EG M	Filetto ISO metrico standard per filetti riportati DIN 8140-2	
EG UNC	EG Filetto unificato grosso per filetti riportati ASME B18.29.1	
EG UNF	EG Filetto unificato grosso per filetti riportati ASME B18.29.1	
UNJC	Filetto unificato grosso ASME B1.15 e ISO 3161	
UNJF	Filetto unificato extrafine ASME B1.15 e ISO 3161	
BSW	Filetto Whitworth BS84	
NPT	Filetto gas conico americano con guarnizione (1:16) ANSI/ASME B1.20.1	
NPTF	Filetto gas conico americano con guarnizione (1:16) ANSI/ASME B1.20.3	
Rc	Filetto Whitworth conico per tubi (1:16) DIN EN 10226-2 (ISO7-1)	
Rp	Filetto Whitworth cilindrico per tubi DIN EN 10226-1 (ISO7-1)	

 Questi tipi di filetti, maschi a mano e filiere sono disponibili nello shop online.

Forme d'imbocco

	Forma B (con imbocco corretto, imbocco 4-5 filetti)
	Forma C (senza imbocco corretto, imbocco 2-3 filetti)
	Forma D (senza imbocco corretto, imbocco 4-5 filetti)
	Forma E (senza imbocco corretto, imbocco 1,5-2 filetti)

Materiali da taglio

HSS	Acciaio rapido
HSS-E	Acciaio superrapido ad elevate prestazioni
HSS-E / MDI	Materiale di base HSS-E Materiale da taglio/da rullatura MDI
HSS-PM	Acciaio superrapido sinterizzato ad elevate prestazioni
MDI	Metallo duro integrale

Irrinunciabile per la vostra produzione!

Diametri preforo per filetti a colpo d'occhio grazie al poster per officina CERATIZIT!

Campi d'impiego

WNT \ Performance	
UNI	Per impiego universale fino a 1100 N/mm ²
ST	Per acciai di buona lavorabilità
FE	Filiere per acciaio
VG	Per acciai bonificati e resistenti al calore < 1100 N/mm ²
HR	Per acciai ad elevata resistenza fino a < 1400 N/mm ²
VA	Per qualità di acciaio resistenti alla corrosione e agli acidi fino a 1100 N/mm ²
GG	Per ghisa
NW	Per alluminio
Soft	Per materiali teneri
Ms	Per ottone a truciolo corto
AMPCO	Per leghe Ampco 
Ti	Per titanio e leghe di titanio
Ni	Per Inconel 718
HT	Per acciai temprati e getti in ghisa fino a 55 HRC

EC	Maschi a rullare DuoForm per applicazioni universali
NEO	Maschi a rullare DuoForm per leghe resistenti al calore
ERGO	Maschi a mano per acciai inossidabili, resistenti al calore e acciai bonificati fino a 1100 N/mm ² 
ERGO F.T	Maschi a mano per acciai fino a 1400 N/mm ² , acciai al tungsteno, getti in ghisa 

 Gli utensili per queste applicazioni sono disponibili nello shop online.

WNT \ Standard	
UNI	Per applicazioni fino a 1000 N/mm ²
FE	Per acciai fino a 850 N/mm ²
FE-HF	Per acciai ad elevata resistenza fino a 1100 N/mm ²
VA	Per acciai inossidabili e acciai resistenti agli acidi
GG	Per ghisa
AL	Per alluminio e leghe di alluminio

6

Caratteristiche specifiche

AUT	Esecuzione corta per lavorazione su macchine automatiche
AZ	Con denti alternati, riduce l'attrito
CNC	Per maschiatura rigida su macchine CNC con mandrino a compensazione assiale
DRY	Per lavorazione a secco o con refrigerazione minimale
EL	Serie extralunga con lunghezza totale doppia
ES	Extracorto
HML	Con taglienti in metallo duro saldobrasati per maggiori velocità di taglio
LH	Per filetti sinistri

MMB	Maschi a macchina per dadi
NC	Per maschiatura rigida su macchine CNC con mandrino a compensazione assiale
NCW	Con attacco Weldon per la maschiatura rigida CNC senza mandrino a compensazione assiale
R_z=1	Filiere lappate
S	Con rastremazione conica posteriore, per filetti profondi
SN	Maschi a rullare con scanalature di lubrificazione
TS	Per lavorazione ad elevate velocità, fino a 100 m/min.

Dimensioni in mm; P=passo

Tabella delle tolleranze di costruzione

6

I filetti che devono essere rivestiti richiedono un maschio maggiorato.
La maggiorazione dipende dallo spessore del rivestimento e dall'angolo del fianco.

Con

- 60° Angolo del fianco maggiorazione = 4 x spessore del rivestimento
- 55° Angolo del fianco maggiorazione = 4,331 x spessore del rivestimento
- 30° Angolo del fianco maggiorazione = 7,727 x spessore del rivestimento

Classe d'impiego per maschi – denominazione secondo		Classe di tolleranza del filetto interno da tagliare					
DIN	ISO						
4H	ISO1	4H	5H	-	-	-	-
6H	ISO2	4G	5G	6H	-	-	-
6G	ISO3	-	(4E)	6G	7H	8H	
7G	-	-	-	(6E)	7G	8G	

i Per particolari impieghi, ad esempio su ghisa abrasiva o materie plastiche, occorre scegliere altre dimensioni che vengono definite in base all'esperienza. In tal caso viene aggiunta una X alla denominazione della classe di tolleranza, ad es. ISO 2X, anche se la tolleranza del filetto interno può essere limitata (6HX per il campo di tolleranza 6H e 5G). Inoltre va tenuto conto del fatto che le dimensioni del filetto interno tagliato non dipendono solamente dalle dimensioni del maschio ma anche dal materiale da lavorare e dalle condizioni di produzione in generale. Per maschi sgrassatori e semifinitori non sono definite tolleranze dimensionali.

Maschi a rullare

Maschi a rullare DuoForm per materiali adatti alla deformazione a freddo fino a 1400 N/mm² oppure min. 5 % di resistenza alla trazione. Il filetto viene prodotto mediante deformazione plastica. Grazie a questo il filetto prodotto raggiunge una resistenza molto elevata.

» Importante

Prima di rullare un filetto, assicuratevi che il cliente sia d'accordo con questo metodo di produzione: in determinati settori la rullatura di filetti **non** è ammessa.

Possano rimanere sporcizia o batteri nella parte superiore del filetto.

Deformazione a step mediante pressione

← Pezzo

← Maschi a rullare

Il profilo del filetto viene premuto nel materiale in varie fasi per via dell'imbocco del filetto.

Caratteristiche

- ▲ Tipo applicabile con vari materiali
- ▲ Per filetti passanti e ciechi
- ▲ Qualità della superficie molto buona
- ▲ Elevata resistenza statica e dinamica del filetto
- ▲ Lavorazione sicura di filetti profondi e posizionati in bassp
- ▲ Tempi brevi di lavorazione
- ▲ Non vi sono problemi di evacuazione truciolo
- ▲ Nessun filetto disassato
- ▲ Elevata sicurezza dei processi
- ▲ Materiali HSS-E e HSS-PM fino a ca. 33 HRC con una resistenza alla trazione del materiale di min. 5 %

Forma non abbastanza definita –
preforo troppo grande

Forma troppo espresa (sovrapposta) –
preforo troppo piccolo

Forma perfetta – preforo corretto

Risoluzione dei problemi

Bassa durata utile

Cause

- ▲ Rotture a fatica dei taglienti nella parte dell'imbocco
- ▲ Durezza o materiale di base dell'utensile non idoneo per la lavorazione
- ▲ Preforo troppo piccolo o indurito
- ▲ Lubrificazione insufficiente o parametri d'impiego scorretti

Misure

- ▲ Imbocco più lungo o numero maggiore di scanalature con lunghezza d'imbocco identica, pertanto un numero maggiore di taglienti attivi
- ▲ In utensili riaffilati è possibile che cali la durezza di base, applicare i parametri corretti per la riaffilatura
- ▲ Cambio più frequente o riaffilatura dell'utensile a forare
- ▲ Parametri di applicazione corretti per l'utensile di foratura
- ▲ Scegliere il lubrificante corretto e assicurare la fornitura di una quantità sufficiente

Filetti eseguiti non in asse

Cause

- ▲ La geometria da taglio non è adatta
- ▲ Il numero di giri del mandrino non è compatibile con l'avanzamento
- ▲ I maschi per fori ciechi vengono applicati con eccessiva pressione di taglio iniziale
- ▲ I maschi per fori passanti vengono applicati con pressione di taglio iniziale insufficiente

Misure

- ▲ Rivedere programmazione e cartuccia principale e altri strumenti per la sincronizzazione
- ▲ Utilizzare un mandrino portamaschio con compensazione assiale
- ▲ Ridurre la pressione iniziale di taglio
- ▲ Aumentare la pressione di taglio iniziale

Filetto troppo grande

Cause

- ▲ Le tolleranze dell'utensile e del calibro per filetti sono compatibili
- ▲ Taglienti degli utensili con bave dopo l'affilatura
- ▲ Bave causate da deformazione a freddo

Misure

- ▲ Applicare tolleranze corrette e calibro per filettature
- ▲ Realizzare una sbavatura precisa
- ▲ Utilizzare una geometria (positiva) adatta
- ▲ Ridurre la velocità di taglio
- ▲ Effettuare un altro trattamento superficiale o un altro rivestimento
- ▲ Usare un mandrino portamaschio con compensazione assiale
- ▲ Utilizzare un lubrificante

Rottura utensile

Cause

- ▲ L'utensile è spuntato
- ▲ L'utensile tocca il fondo del foro
- ▲ Croste di fusione
- ▲ Preforo troppo piccolo
- ▲ Tucioli accumulati
- ▲ Velocità di taglio scorretta
- ▲ Intasamento nella scanalatura
- ▲ Refrigerazione o lubrificazione insufficiente

Misure

- ▲ Utilizzare un maschio del set
- ▲ Utilizzare un utensile con un'elica con meno torsione
- ▲ Utilizzare un utensile con un imbocco più corto/lungo
- ▲ Controllo della profondità del preforo e della profondità del filetto
- ▲ Effettuare un preforo con maggiore profondità
- ▲ Correggere la velocità di taglio
- ▲ Cambiare rivestimento o trattamento della superficie
- ▲ Utilizzare un mandrino con compensazione assiale
- ▲ Usare un lubrificante adatto
- ▲ Utilizzare il diametro con preforo corretto
- ▲ Cambiare geometria e/o forma di scanalatura
- ▲ Tenere conto della forma e della formazione del truciolo

Rivestimenti

vap.

- ▲ Vaporizzato
- ▲ La vaporizzazione evita la formazione di materiale di riporto sull'utensile e aumenta la durezza della superficie e di conseguenza anche la resistenza all'usura

nitr.

- ▲ Nitruato
- ▲ La nitrurazione aumenta la resistenza all'usura e offre buone caratteristiche antifrizione

vap.
+
nitr.

- ▲ Vaporizzato e nitruato
- ▲ Una combinazione di una maggiore durezza della superficie e conduttore di lubrificante

TiN

- ▲ Rivestimento TiN
- ▲ Massima temperatura d'impiego: 450 °C

TiN
GS

- ▲ Substrato antifrizione di nitruo di titanio
- ▲ Elevata resistenza all'usura con buone caratteristiche antifrizione
- ▲ Massima temperatura d'impiego: 450 °C

TiCN

- ▲ Rivestimento multistrato TiCN
- ▲ Massima temperatura d'impiego: 450 °C

DLC

- ▲ Rivestimento DLC ("Diamond-Like Carbon")
- ▲ Particolarmente adatto per la lavorazione di metalli non ferrosi
- ▲ Temperatura d'impiego max.: 400 °C

Ti200

- ▲ Rivestimento TiN
- ▲ Buona idoneità per elevate velocità nella rullatura
- ▲ Massima temperatura d'impiego: 450 °C

OSM

- ▲ Substrato duro e antifrizione
- ▲ Per l'applicazione su acciai altamente resistenti

CH

- ▲ Rivestimento di carbonio amorfo
- ▲ Per la lavorazione di metalli non ferrosi
- ▲ Riduce l'adesione del materiale

HCr

- ▲ Cromato duro
- ▲ Per l'uso con metalli non ferrosi
- ▲ Bassa rugosità della superficie

CrN

- ▲ Rivestimento di cromo e azoto
- ▲ Rivestimento con elevata resistenza all'usura
- ▲ Particolarmente per la lavorazione di alluminio, idoneo anche per materiali P, M e S

AlTiN-
HD

- ▲ Rivestimento nanostrato con base AlTiN
- ▲ Temperatura d'impiego max.: 500 °C
