New products for machining technicians

NEW Polygon system extension

Milling insert for part-off → Page 15

- ▲ Reliable cutting with groove depths up to 11.5 mm in almost all materials
- ▲ Longest service lives with maximum process security
- ▲ Different diameters with groove width of 1.5 mm available from stock

Thread milling insert partial profile → Page 16

- ▲ Extension of the existing 50 882 range to include the thread pitch 3.5–6 mm

NEW MiniMill XL multipurpose milling system

Milling insert → Page 28
Tool holder → Page 33

- ▲ Extension of the tried-and-tested MiniMill multipurpose milling system Ø 37 mm by Ø 50 mm
- ▲ Reliable cutting with groove depths up to 16.5 mm in almost all materials
- ▲ Cross-pitched versions for significantly greater self-cleaning effect with lower chip jamming tendency
- ▲ Wide range of groove widths and holders available from stock

NEW Performance Thread milling cutter Type SFSE

→ Page 63–66

- ▲ Multi-row shank thread milling cutter with countersink cutting edge
- ▲ Universal application in almost all materials
- ▲ 2-in-1 tool: thread milling and countersinking with a single tool
- ▲ Maximum reliability and process security
- ▲ Unsurpassed price-performance ratio

NEW Performance Thread milling cutter Type SGF

→ Page 71+72

- ▲ Multi-row shank thread milling cutter
- ▲ Universal application in almost all materials
- ▲ Maximum reliability and process security
- ▲ Unsurpassed price-performance ratio

NEW Shank thread milling cutter type HR

→ Page 60

- ▲ Single-row shank thread milling cutter with universal application, but with focus on hard machining
- ▲ Outstanding solution for high lateral forces during machining
  → absolutely cylindrical, true-to-gauge and dimensionally accurate threads of the highest quality

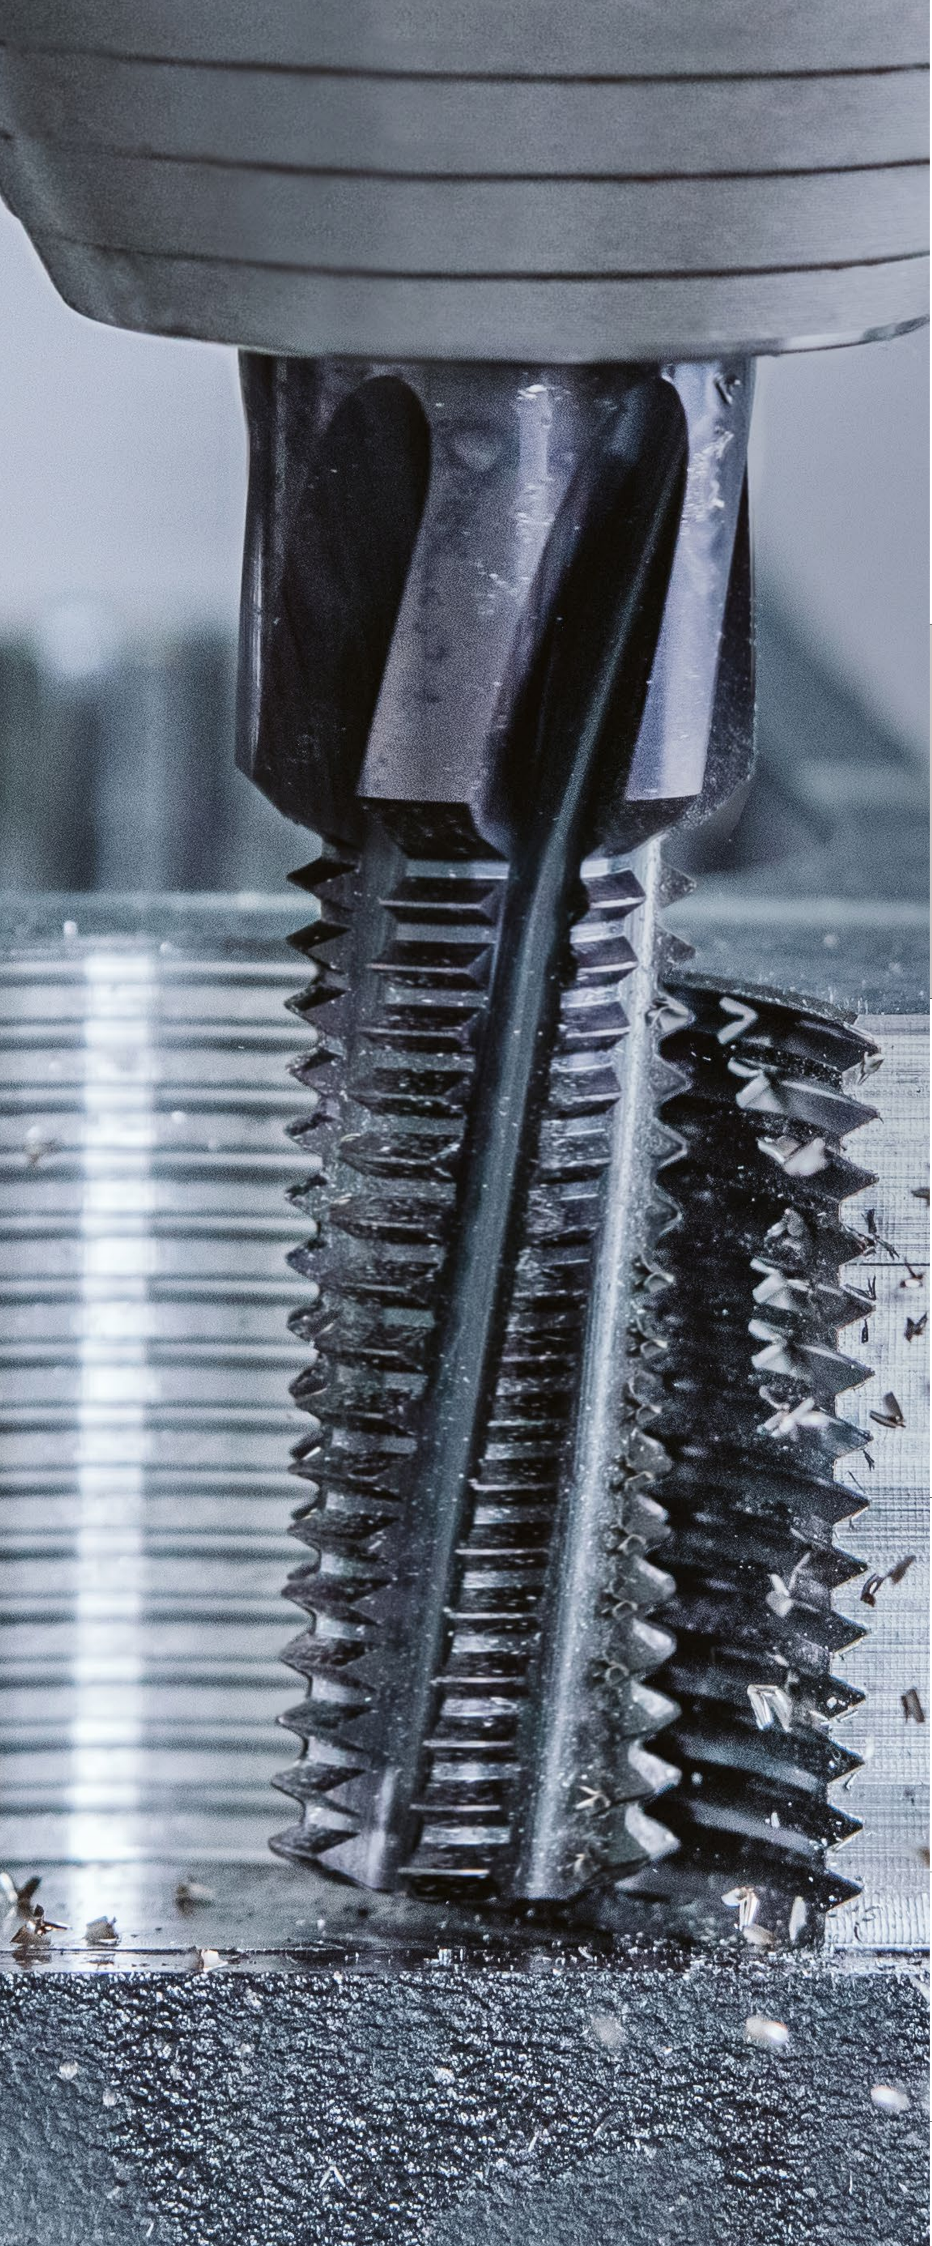

Table of contents

WNT \ Performance

Premium quality tools for high performance.

The premium quality tools from the **WNT Performance** product line have been designed for specific applications and are distinguished by their outstanding performance. If you make high demands on the performance of your production and want to achieve the very best results, we recommend the Premium tools in this product line.

WNT \ Standard

Quality tools for standard applications.

The quality tools of the **WNT Standard** product line are high quality, powerful and reliable and enjoy the highest trust of our customers worldwide. Tools from this product line are the first choice for many standard applications and guarantee optimal results.

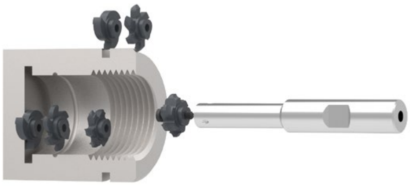
Tool types

System 300	Circular milling cutter with solid carbide insert
Polygon	Circular shank milling cutter with carbide indexable insert (polygon insert seat)
Mini Mill	Circular milling cutter with solid carbide milling insert (with three-rib insert connection)
MWN	Multi-tooth thread milling cutter with carbide indexable inserts (straight insert seat) and Weldon flat
GZD	Multi-tooth thread milling cutter with carbide indexable inserts (angled insert seat) and Weldon flat
GZG	Multi-tooth thread milling cutter with carbide indexable inserts (straight insert seat) and Weldon flat
EAW	Single-row thread milling cutter with carbide indexable inserts and Weldon flat
EWM	Single-row thread milling cutter with carbide indexable insert and SK adapter
BGF	Solid carbide drill thread milling cutter
Micro Mill	Solid Carbide Circular End Milling Cutter
ZBGF	Solid carbide circular drill thread milling cutter
SGF	Thread milling cutter
SFSE	Thread milling cutter with chamfer facet
SFSE Micro	Thread milling cutter for smallest threads
HR	Single-row shank thread milling cutter

Overview Circular and Thread Milling Cutters

Modular Circular Milling Cutters with Carbide Indexable Inserts (ModuSet)

- ▲ the perfect tool for every application
- ▲ various holders, depending on overhang
- ▲ the same threading insert for different pitches and diameters
- ▲ highest flexibility and stability
- ▲ in addition to circular thread milling, circular and linear milling operations can also be carried out



1st choice for small batch sizes and large threads

Thread Milling Cutters with Indexable Carbide Inserts (ModuThread)

- ▲ exchange of the insert for different threads
- ▲ same threading insert for different diameters

Solid Carbide Thread Milling Cutters (MonoThread)

- ▲ short machining times, ideal for volume production
- ▲ one tool for all thread types
- ▲ one thread milling cutter for different diameters with the same pitch

MicroMill

SGF

ZBGF

BGF

Thread types

M	Metric ISO standard thread
MF	Metric ISO fine thread
G	Whitworth pipe thread
UN	Unified thread
UNC	Unified Standard Thread
UNF	Unified fine thread
BSW	Whitworth thread
BSF	Whitworth fine thread
NPT	American taper pipe thread
Pg	Steel conduit thread
Tr	Trapezoidal thread

Thread milling process description

Thread milling

- ▲ Cutting
- ▲ Thread production by circular milling in the pitch (helical interpolation)
- ▲ Can be used for a wide range of materials up to 60 HRC
- ▲ Lower torque than taps and thread formers (no reversing of the spindle necessary)
- ▲ Thread machining to the bottom of the hole possible
- ▲ High-speed cutting (HSC) can be performed

Advantages of thread milling

- ▲ Different tolerances can be produced with one tool
- ▲ One tool for blind hole and through hole machining
- ▲ Outstanding workpiece surfaces and dimensional accuracy guaranteed
- ▲ One tool for right and left-hand threads
- ▲ Low cutting pressure when machining thin-walled parts
- ▲ Precisely repeatable thread depth
- ▲ No chip issues and no chip root residues in the finished thread

Added advantages of thread milling cutters with chamfer facet

- ▲ Savings in tool change and setup times, resulting in significantly shorter machining times
- ▲ Optimisation of magazine assignment in the machine

Process

Positioning above the workpiece	Entry to start position for thread milling	Circular approach (milling) in inward circular grinding (90°/180°) at 1/4 pitch	1x pitch in "Z+" direction	Outward circular grinding in the centre of the hole (90°/180°)	Exit to start position	
Climb milling is shown here.
Further information on the milling processes (climb and conventional milling) can be found on → **page 84**

Description of procedure, thread milling cutters

Thread milling

- ▲ Cutting
- ▲ Production of a complete thread – drilling, countersinking and thread milling with just one tool
- ▲ Can be used in different materials (K/N)
- ▲ Prerequisite: CNC-controlled milling machine or machining centre with the helical interpolation function

Advantages

- ▲ Shortest machining times thanks to high cutting speeds and feeds
- ▲ Savings in tool change and setup times, resulting in significantly shorter machining times
- ▲ Optimisation of magazine assignment in the machine
- ▲ Different tolerances can be produced with one tool
- ▲ Outstanding workpiece surfaces and dimensional accuracy guaranteed
- ▲ One tool for blind hole and through hole machining
- ▲ Precisely repeatable thread depth
- ▲ No chip issues and no chip root residues in the finished thread
- ▲ High-speed cutting (HSC) can be performed

Process

Positioning above the workpiece	Tapping, drilling, countersinking	Chip removal	Entry to start position for thread milling	Circular approach (milling) in inward circular grinding (90°/180°) at 1/4 pitch	1x pitch in "Z+" direction	Outward circular grinding in the centre of the hole (90°/180°)	Exit to start position	
Circular drill thread milling

- ▲ Cutting
- ▲ Production of a complete thread – drilling, countersinking and thread milling with just one tool
- ▲ Can be used in different materials (H/S/O)
- ▲ Prerequisite: CNC-controlled milling machine or machining centre with the helical interpolation function

Advantages

- ▲ Shortest machining times due to simultaneous creation of the tap hole and thread
- ▲ Savings in tool change and setup times, resulting in significantly shorter machining times
- ▲ Optimisation of magazine assignment in the machine
- ▲ Different tolerances can be produced with one tool
- ▲ Outstanding workpiece surfaces and dimensional accuracy guaranteed
- ▲ One tool for blind hole and through hole machining
- ▲ Precisely repeatable thread depth
- ▲ Optimum chip removal and no chip root residues in the finished thread

Process

Positioning above the workpiece	Chamfering (until countersinking depth is reached)	Return to the start position above the component	Circular drill thread milling in helical motion to the required thread depth	Outward circular grinding in the centre of the hole (90°/180°)	Exit to start position	
Toolfinder

Tool types				Tool properties	from bore diameter in mm
ModuSet	Modular Circular Milling Cutters with Carbide Indexable Inserts	**Polygon**		▲ high power transmission through polygon connection ▲ 3 and 6 edged inserts ▲ stable holders in solid carbide and steel	9,6
		Mini Mill		▲ three interlocking rib location ▲ compatible with popular manufacturer systems ▲ 3 and 6 edged inserts ▲ stable holders in solid carbide and steel	9,6
		System 300		▲ proven circular milling tool ▲ 3 edged inserts	7,9
ModuThread	Thread Milling Cutters with Indexable Carbide Inserts	**MWN**		▲ multi tooth thread milling cutter ▲ double sided inserts ▲ exclusively for thread production ▲ holder for tapered threads	9,0
		GZD		▲ multi tooth drilling and thread milling cutter ▲ for thread milling in solid material ▲ core hole and thread with one tool	14,0
		GZG		▲ multi tooth thread milling cutter ▲ exclusively for thread production	18,5
		EAW		▲ single-row thread milling cutter ▲ inserts with 2 or 4 cutting edges ▲ exclusively for production of the thread ▲ insert holder with cylindrical shank DIN 1835	17,5
		EWM		▲ single-row thread milling cutter ▲ inserts with 4 cutting edges ▲ exclusively for production of the thread ▲ monoblock insert holder with steep taper DIN 69871	43,0
MonoThread	Solid Carbide Thread Milling Cutters	**Micro Mill**		▲ solid carbide circular milling cutter for small diameters	1,25
		BGF		▲ drill thread milling cutter ▲ core hole, countersink, thread and thread undercut with one tool	2,45
		ZBGF		▲ circular drill thread milling cutter ▲ core hole, countersink and thread with one tool	2,3
		SFSE Micro		▲ solid carbide shank thread milling cutter with chamfer facet ▲ just one tool for countersink and thread ▲ specially developed for the smallest threads in hard materials	0,75
		SFSE		▲ solid carbide thread milling cutter with chamfering facet ▲ only one tool for threading and chamfering	2,4
		SGF		▲ solid carbide thread milling cutter without chamfering facet ▲ exclusively for thread production	2,4
		HR		▲ single-row shank thread milling cutter ▲ exclusively for production of the thread ▲ up to 3xD in materials up to 60 HRC	3,14

The cutting data is strongly influenced by external conditions, such as the stability of the tool and workpiece clamping, material and type of machine. The specified values represent guideline cutting data that can be adjusted by approx. **±20%** according to the usage conditions.

The cutting data depend extremely on the external conditions, the material and machine type. The indicated values are possible values which have to be increased or reduced, inside the bracket, according to the application conditions.

Milling Procedures

Climb milling

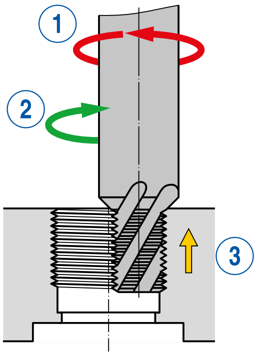
Characteristics:

① Tool rotation direction „right“

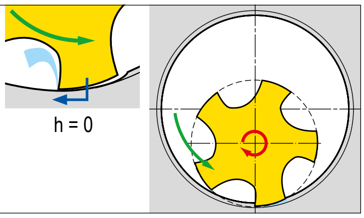
② Toolpath counter clockwise

③ Feed direction „outwards“

▶ Right hand thread



When climb milling, the chip thickness at the end of cut is always 0 (h=0)



Conventional milling

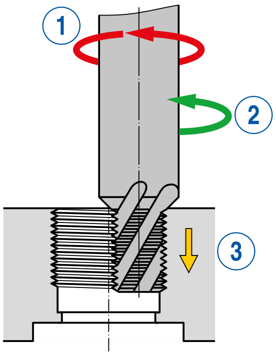
Characteristics:

① Tool rotation direction „right“

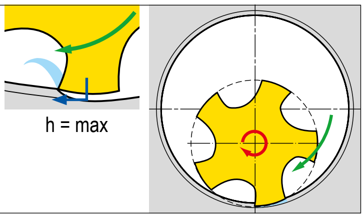
② Toolpath clockwise

③ Feed direction „inwards“

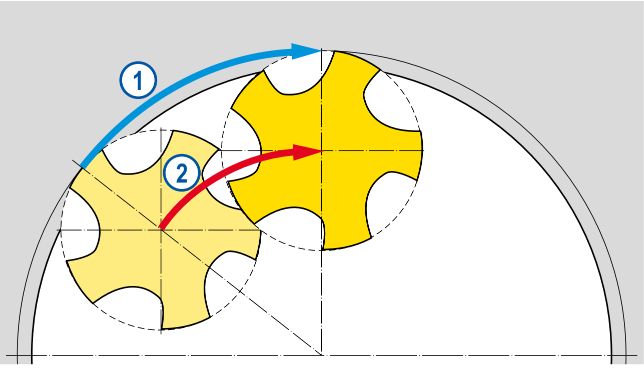
▶ Right hand thread



When conventional milling, the chip thickness at the end of cut is always at maximum (h=max)

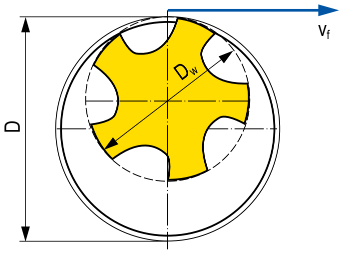


Feed rate calculation



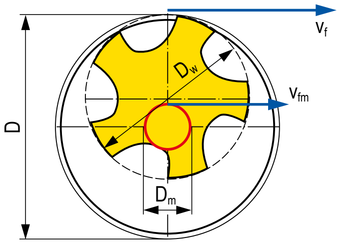
D_w = Effective diameter in mm
n = RPM in min^{-1}
f_z = Feed per tooth in mm
z = Number of cutting edges (radial)
D = Nominal thread diameter = external profile diameter in mm
D_m = Centre path diameter ($D-D_W$) in mm

① Peripheral feedrate v_f



$v_f = n \times f_z \times z$ mm/min.

② Centerline feedrate v_{fm}



$v_{fm} = \dfrac{v_f \times (D - D_w)}{D}$ mm/min.

Tips for the User

With thread milling there are two different programme possibilities with the feed motion of the tool.

On the one hand the machine controls the feed at the diameter of the tool, on the other hand the feed control is the tool center line.
In order to ascertain which method the machine control uses, the following method should be employed:

- ▲ Enter the thread milling routine into the control.
- ▲ Enter a safety margin into the program, so that the tool runs in air.
- ▲ Run the program through and check the operating time.
- ▲ Compare the actual time with the calculated theoretical time.

If the time is longer than the calculated time the feed is controlling the tool center line.
If the time is shorter than the calculated time the feed is controlling the diameter of the tool.

Numeric calculation of cutting data for thread milling

$$n = \frac{v_c \times 1000}{d \times \pi}$$

$$v_c = \frac{d \times \pi \times n}{1000}$$

$$v_f = f_z \times z \times n$$

$$n = \frac{v_f}{f_z \times z}$$

$$f_z = \frac{v_f}{z \times n}$$

Milling – external contour

$$v_{fm} = \frac{v_f \times (D + d)}{D}$$

$$v_f = \frac{D \times v_{fm}}{(D + d)}$$

Milling – internal contour

$$v_{fm} = \frac{v_f \times (D - d)}{D}$$

$$v_f = \frac{D \times v_{fm}}{(D - d)}$$

Helical plunging

$$U_{arc} = 0{,}25 \times v_{fm}$$

Ramping in the arc

$$U_{arc} = v_{fm}$$

n rev./min. = rpm
v_c m/min = Cutting speed
d mm = Tool diameter
D mm = Nominal thread-Ø
v_f mm/min. = Feed rate at the diameter

v_{fm} mm/min. = Feed rate at the centre
U_{arc} mm/min. = programmed ramping feed rate
f_z mm = Feed per tooth
z Piece = number of cutting edges of the cutter

Correction values for the internal thread milling

The milling radius correction which is entered into the machine control, can be calculated as follows:

half the cutter Ø – 0.05 x pitch P

Example:
M30x3
Cutter-Ø:
20 mm

$$\frac{Ø20}{2} - (0{,}05 \times 3) = \underline{\underline{9{,}85\ \text{mm}}}$$

9,85 mm is the milling radius to be entered into the machine control

Coatings

AlCrN	▲ High-performance AlCrN multilayer coating ▲ max.application temperature: > 1100 °C
CWX 500	▲ Carbide, TiAIN-coated ▲ The universal carbide grade for almost all materials
TiAIN	▲ TiAIN multilayer coating ▲ Maximum application temperature: 900 °C
TiCN	▲ TiCN multilayer coating ▲ Maximum application temperature: 450 °C
TiN	▲ TiN coating ▲ Maximum application temperature: 450 °C
Ti 500	▲ TiAIN-coating ▲ Maximum application temperature: 500 °C
Ti 600	▲ TiAIN multilayer coating ▲ Maximum application temperature: 650 °C
Ti 601	▲ High-performance TiAIN multilayer coating ▲ Maximum application temperature: 900 °C
Ti 602	▲ TiCN multilayer coating ▲ Maximum application temperature: 400 °C
