WNT \ Performance

Premium quality tools for high performance.

The premium quality tools from the **WNT Performance** product line have been designed for specific applications and are distinguished by their outstanding performance. If you make high demands on the performance of your production and want to achieve the very best results, we recommend the Premium tools in this product line.

WNT \ Standard

Quality tools for standard applications.

The quality tools of the **WNT Standard** product line are high quality, powerful and reliable and enjoy the highest trust of our customers worldwide. Tools from this product line are the first choice for many standard applications and guarantee optimal results.

Toolfinder

External thread turning
43-63

Internal thread turning
64-69

Thread milling
24-28

Overview

Tapping

- ▲ For through holes and blind holes
- ▲ All common thread types
- ▲ Universal application
- ▲ Static application
- ▲ Rotating application

8-18

Thread milling

- ▲ Excellent surface qualities
- ▲ For through holes and blind holes
- ▲ Universal application
- ▲ Various diameters with the same pitch

24-28

Circular Milling

- ▲ Circular milling
- ▲ Slot milling
- ▲ Multipurpose milling
- ▲ Universal application

30-36

Thread turning

- ▲ Size 06 insert
- ▲ Size 08 insert
- ▲ Size 11 insert
- ▲ Size 16 insert
- ▲ Internal and external thread
- ▲ Shank cross-section = 8 - 25 mm
- ▲ Universal application

43-70

Circular and slot milling
30-36

Tapping
8-18

Thread types

M	ISO metric coarse thread DIN 13	UNC	Unified coarse thread ASME – B1.1	BSW	Whitworth thread BS84
MF	ISO Metric fine thread DIN 13	UNF	Unified fine thread ASME – B1.1	BSF	Whitworth fine thread
MJ	Metric thread for the aviation industry	UNJC	Unified Coarse Thread ASME – B1.15 and ISO 3161	UN	Unified thread
G	Whitworth pipe thread DIN-EN-ISO 228	UNJF	Unified fine thread ASME – B1.15 and ISO 3161	UNEF	American Unified Thread (Extra Fine)

Tap types

Tool type

Stabil	for through holes to 4xD
Salo-Rex	for blind holes up to 3xD, high helix angle for secure chip evacuation
SL	for blind holes up to 2xD, 15°, 25° or 30° helix angle

Application range

UNI	for universal application
------------	---------------------------

Circular and thread milling cutter types

Tool type

Micro Mill	Solid Carbide Circular End Milling Cutter	SGF	Thread milling cutter
Mini Mill	Circular milling cutter with solid carbide insert		

Profile Type Description

Full profile

- ▲ Core diameter does not have to be machined to the finished core diameter
- ▲ A minimum infeed of 0.07 mm is required
- ▲ Insert can only be used for one pitch

Partial profile

- ▲ Core diameter must be premachined to the final dimension
- ▲ A minimum infeed of 0.07 mm is required
- ▲ One threading insert can be used to machine several pitches
- ▲ The threading insert can therefore be used for any application

Mini Thread Turning Insert

- ▲ From a min. core hole diameter of Ø 6 mm or Ø 8 mm

Explanation of symbols – Taps

Chamfer form

Form B (with spiral point,
4 - 5 threads per chamfer)

Form C (without spiral point,
2 - 3 threads per chamfer)

Form D (without spiral point,
4 - 5 threads per chamfer)

Form E (without spiral point,
1.5 - 2 threads per chamfer)

Helix angle

Example: helix angle 42°

Tensile strength

Example up to 1100 N/mm²

Tolerances

Explanation of the tolerances can be found on
→ **Page 21**

Coloured rings

WNT \ Performance

An explanation of the coloured rings can be
found on → **Page 20**

Thread types

Explanation of the thread types can be found
on → **Page 4**

Tool Material

High-performance high speed steel

Hole type

Through hole

Blind hole

Explanation of symbols – Circular and thread milling cutters

Version

central internal coolant

lateral internal coolant

Solid carbide

Thread / Flank angle

Explanation of the thread types can be found
on → **Page 4**

Flank angle 60°

Shank

DIN 6535
HA HB

Applications

Full radius slot milling

Slot milling

Multipurpose milling

Chamfering and Deburring

Gear milling

IR = internal right, IL = internal left

Explanation of symbols – Thread turning

Flank angle

Flank angle 55°

Flank angle 60°

Thread types

Explanation of the thread types can be found
on → **Page 4**

- = Main Application
- = Extended application

Highlights

Through hole – machine taps right-hand,
type Stabil HR

M

- ▲ Specialist for thread production in high-strength steels
- ▲ New optimised hard material/carbon coating delivers the very best results
- ▲ 4xD

Blind hole – machine taps right-hand,
type SL HR

M

- ▲ Specialist for thread production in high-strength steels
- ▲ New optimised hard material/carbon coating delivers the very best results
- ▲ 2xD

 Further dimensions and taps can be found in our → **main catalogue in Chapter 6 Taps**

 The cutting data is highly dependent on external conditions, such as stability of the tool and workpiece clamping, material and machine type!
The values indicated represent possible cutting data which may need to be corrected depending on operating conditions !

 This article can be found in our online shop at cuttingtools.cerazit.it.com

Dimensions in mm; P=Pitch

Tap Type Explanation

Through hole tap type Stabil

Blind hole tap type Salo-Rex

Blind hole tap type SL

Coloured rings – overview

WNT \ Performance

Thread tolerances and recommended manufacturing tolerances

Workpieces to be plated require oversize taps.
The interference depends on the coating thickness and the flank angle.

at	60° Flank angle	Oversize $\triangleq 4 \times$ coating thickness
	55° Flank angle	Oversize $\triangleq 4.331 \times$ coating thickness
	30° Flank angle	Oversize $\triangleq 7.727 \times$ coating thickness

Application class of the tap Designation according to		Tolerance class of the internal thread to be cut					
DIN	ISO						
4H	ISO1	4H	5H	-	-	-	-
6H	ISO2	4G	5G	6H	-	-	-
6G	ISO3	-	(4E)	6G	7H	8H	-
7G	-	-	-	(6E)	7G	8G	-

For special applications, e.g. abrasive cast iron materials or plastics other dimensions have to be chosen which are determined on previous experience.
In such cases an „X“ is added to the short designation of the tolerance, e.g. ISO 2X, however the tolerance zone assignment may be limited (6HX for tolerance zone 6H and 5G). In addition it should be taken into account that the dimensions of the internal thread do not only depend on the dimensions of the tap but on the material to be machined and all production conditions.
For first taps and intermediate taps no thread dimensions are determined.

Troubleshooting

Poor tool life

Cause

- ▲ Overload fractures of the cutting edge on the lead
- ▲ Hardness or tool material not suitable for the application
- ▲ Core hole too small, or work hardened
- ▲ Insufficient lubrication or incorrect application parameters

Remedy

- ▲ A longer lead or more flutes for the same lead length, giving a greater number of cutting teeth
- ▲ In reground tools the hardness can be reduced, apply correct parameters for regrinding
- ▲ Increase frequency of changes or regrinding of the drill
- ▲ Use the correct operating parameters for drilling
- ▲ Select the correct lubricant and ensure adequate supply

Axial thread error

Cause

- ▲ Selected geometry is not suitable
- ▲ Spindle speed is wrong compared with feed (synchronisation error)
- ▲ Blind hole taps are used with high feed pressure
- ▲ Through hole taps are used with low feed pressure

Remedy

- ▲ Check programming and pitch control or machine synchronisation
- ▲ Use tapping chuck with length compensation
- ▲ Increase retraction feed pressure
- ▲ Increase feed pressure

Oversize thread

Cause

- ▲ Thread tolerances of tool and thread gauge do not match
- ▲ Burred tool edges after regrinding
- ▲ Cold pressure welding

Remedy

- ▲ Check the correct tolerances for tool and thread gauge
- ▲ Carefully deburr
- ▲ Use appropriate (positive) geometry
- ▲ Reduce cutting speed
- ▲ Use different surface treatment or coating
- ▲ Use tapping chuck with length compensation
- ▲ Use appropriate lubricant

Broken tool

Cause

- ▲ Tool is worn
- ▲ Tool has hit the bottom of the hole
- ▲ Weld deposits
- ▲ Core hole too small
- ▲ Chip trapping
- ▲ Incorrect cutting speed
- ▲ Chip trapping in the flute
- ▲ Insufficient cooling / lubrication

Remedy

- ▲ Employ set taps
- ▲ Use a tool with lower helix
- ▲ Use tools with a shorter / longer lead
- ▲ Check the pre-drilling depth and the thread depth
- ▲ Drill core hole deeper
- ▲ Correct cutting speed
- ▲ Use a different coating or surface treatment
- ▲ Use tool holder with length compensation
- ▲ Use suitable lubricant
- ▲ Use correct core hole
- ▲ Change geometry and / or flute type
- ▲ Note chip shape and chip formation

The cutting data is strongly influenced by external conditions, such as the stability of the tool and workpiece clamping, material and type of machine.
The specified values represent guideline cutting data that can be adjusted by approx. **±20%** according to the usage conditions.

The cutting data is strongly influenced by external conditions, such as the stability of the tool and workpiece clamping, material and type of machine. The specified values represent guideline cutting data that can be adjusted by approx. $\pm 20\%$ according to the usage conditions.

Milling Procedures

Climb milling

Characteristics:

Conventional milling

Characteristics:

Feed rate calculation

- ① Peripheral feedrate v_f
- ② Centerline feedrate v_{fm}

Peripheral feedrate v_f

D_w = Effective diameter in mm
 n = RPM in min^{-1}
 f_z = Feed per tooth in mm

Centerline feedrate v_{fm}

z = Number of cutting edges (radial)
 D = Nominal thread diameter = external profile diameter in mm
 D_m = Centre path diameter ($D - D_w$) in mm

Tips for the User

With thread milling there are two different programme possibilities with the feed motion of the tool.

On the one hand the machine controls the feed at the diameter of the tool, on the other hand the feed control is the tool center line. In order to ascertain which method the machine control uses, the following method should be employed:

- ▲ Enter the thread milling routine into the control.
- ▲ Enter a safety margin into the program, so that the tool runs in air.
- ▲ Run the program through and check the operating time.
- ▲ Compare the actual time with the calculated theoretical time.

If the time is longer than the calculated time the feed is controlling the tool center line.
 If the time is shorter than the calculated time the feed is controlling the diameter of the tool.

Numeric calculation of cutting data for thread milling

$$n = \frac{v_c \cdot 1000}{d \cdot \pi}$$

$$v_c = \frac{d \cdot \pi \cdot n}{1000}$$

$$v_f = f_z \cdot Z \cdot n$$

$$n = \frac{v_f}{f_z \cdot Z}$$

$$f_z = \frac{v_f}{Z \cdot n}$$

Milling – external contour

$$v_{fm} = \frac{v_f \cdot (D + d)}{D}$$

$$v_f = \frac{D \cdot v_{fm}}{(D + d)}$$

Milling – internal contour

$$v_{fm} = \frac{v_f \cdot (D - d)}{D}$$

$$v_f = \frac{D \cdot v_{fm}}{(D - d)}$$

Helical plunging

$$U_{arc} = 0,25 \cdot v_{fm}$$

Ramping in the arc

$$U_{arc} = v_{fm}$$

n	=	rpm	rev./min.
v_c	=	Cutting speed	m/min
d	=	Tool diameter	mm
D	=	Nominal thread-Ø	mm
v_f	=	Feed rate at the diameter	mm/min.

v_{fm}	=	Feed rate at the centre	mm/min.
U_{arc}	=	programmed ramping feed rate	mm/min.
f_z	=	Feed per tooth	mm
Z	=	number of cutting edges of the cutter	

Correction values for the internal thread milling

The cutting edge diameter of the thread milling cutter which is entered into the machine control, can be calculated as follows:

half the cutter Ø – 0.05 x pitch p

Example: M30x3
Cutter-Ø: 20 mm

$$\frac{\emptyset 20}{2} - (0,05 \cdot 3) = \underline{9,85 \text{ mm}}$$

9,85 mm is the cutting radius to be entered into the machine control

Thread turning tools overview

Full profile

- ▲ Improved quality of thread
- ▲ No burr formation
- ▲ No secondary operations
- ▲ Longer service lives

Partial profile

- ▲ One insert can be used for several pitches
- ▲ Reduced stock requirements

Standard external thread turning

The cutting data depends extremely on the external conditions, the material and machine type.
The indicated values are possible values which have to be increased or reduced according to the application conditions.

Pitch angle

Important Information about Standard Shims

- ▲ the pitch angle should be determined through calculation or by using the chart below.
- ▲ the standard threading holder is supplied with a 1.5° inclined insert seat and a shim without angular correction.
Hence the Tool holders are delivered with an angle of inclination β of 1.5°.

Without the appropriate correction of the helix angle, the following may occur

- ▲ the profile will be distorted.
- ▲ insufficient clearance angle.
- ▲ the tool life of the insert is greatly reduced.

Method 1: Calculation

Calculating the helix angle β :

$$\beta = \frac{20 \times TP}{DMIN}$$

20 = constant

β = Helix angle (°)

TP = Pitch (mm)

DMIN = Nominal diameter (mm)

Example calculation

External thread M24 x 1.5

Feed towards chuck

DMIN = Nominal Ø: M24 = 24 mm

TP = Pitch: 1.5 mm

$$\beta = \frac{20 \times 1,5 \text{ mm}}{24 \text{ mm}}$$

$$\beta = 1,25^\circ$$

Method 2: Diagram

From the flank Ø in the diagram, a line is drawn vertically upwards until it intersects with the line of the pitch of the thread to be produced. In the color-coded region in which it is now, a horizontal line to the edge of the chart indicates the appropriate factor.

calculated pitch angle β value	Shim
0,0°–0,99°	0,5°
1,0°–1,99°	1,5°
2,0°–2,99°	2,5°
3,0°–3,99°	3,5°
4,0°–4,99°	4,5°
0,0°–(-0,99°)	-0,5°
-1,0°–(-1,99°)	-1,5°

Thread turning methods

External right-hand thread

External left-hand thread

i The machining examples 2, 4, 6 and 8 require negative shims!
These shims can be found on → **Page 70.**

Internal right-hand thread

Internal left-hand thread

Thread infeed methods

Radial Infeed

- ▲ for pitches less than 1.5 mm
- ▲ for short chipping materials
- ▲ for machining hardened materials
- ▲ simple and quick method

Flank infeed

- ▲ for pitches larger than 1.5 mm
- ▲ with radial penetration the effective cutting edge length is too large, which may lead to chattering
- ▲ with trapezoidal and ACME threads, chip flow on three sides can be problematic

Alternating infeed

- ▲ with large pitches
- ▲ for long chipping materials
- ▲ uniform wear of the cutting edges
- ▲ complicated programming process

Recommended number of cuts and cutting depths

Standard Threading Inserts

Pitch (TP/TPI)	mm	0,50	0,75	1,00	1,25	1,50	1,75	2,00	2,50	3,00	3,50	4,00	4,50	5,00	5,50	6,00	8,00

Troubleshooting

Edge chipping

Cause

- ▲ Common in stainless materials
- ▲ Incorrect grade

Remedy

- ▲ Minimize tool overhang length
- ▲ Check that the insert is clamped
- ▲ Minimize vibration
- ▲ Use a tougher grade

Cratering

Cause

- ▲ Common in stainless materials
- ▲ Cutting speed too high
- ▲ Incorrect grade

Remedy

- ▲ Apply coolant
- ▲ Reduce depth of cut
- ▲ Use a harder grade

Built-up edge

Cause

- ▲ Cutting speed too low
- ▲ Incorrect grade

Remedy

- ▲ Apply coolant
- ▲ Increase cutting speed
- ▲ Use a tougher grade

Thermal cracking

Cause

- ▲ Insufficient coolant
- ▲ Cutting speed too high
- ▲ Incorrect grade

Remedy

- ▲ Apply coolant
- ▲ Reduce cutting speed
- ▲ Use a tougher grade

Plastic deformation

Cause

- ▲ Infeed too large
- ▲ Insufficient coolant
- ▲ Cutting speed too high
- ▲ Incorrect grade

Remedy

- ▲ Apply coolant
- ▲ Reduce depth of cut
- ▲ Reduce cutting speed
- ▲ Use a harder grade

Breakage

Cause

- ▲ Infeed too large
- ▲ Insufficient coolant
- ▲ Plastic deformation
- ▲ Instability
- ▲ Helix angle not appropriate
- ▲ Incorrect grade

Remedy

- ▲ Reduce depth of cut
- ▲ Check machine and tool stability
- ▲ Reduce cutting speed
- ▲ Check helix angle
- ▲ Use a tougher grade

						L	125	11	1/4"
						M	140	16	3/8"
							150	22	1/2"

Overview Thread Turning Types

Further thread turning options can be found in the chapters below.

Thread turning for automatic lathes

TiAlN coated carbide insert for external threading on automatic lathes.

Carbide indexable inserts with a pitch of 0.25 mm–2.0 with appropriate tool holders can be found in chapter → **Turning**.

TC Threading System

Mono and Modular Systems for Internal and External Thread Turning.

TC thread inserts with appropriate tool holders can be found in chapter → **Grooving**.

UltraMini

TiN and TiAlN coated carbide cutting inserts for internal threading from $D_{\min.}$ Ø 2.4 mm.

Cutting inserts for thread turning and other applications with the appropriate tool holders can be found in chapter → **Miniature turning**.

MiniCut

TiAlN carbide inserts for internal threading from $D_{\min.}$ Ø 8 mm.

Cutting inserts for thread turning and other applications with the appropriate tool holders can be found in chapter → **Miniature turning**.

Coatings and Grades

HSS taps

vap.

- ▲ Vaporised
- ▲ Vaporisation (vapour-deposition) prevents cold welds from forming on the tool and increases the surface hardness and thus the wear resistance

vap.
+
nitr.

- ▲ Vaporized + Nitrated
- ▲ Combination of increased surface hardness and lubricant carrier

AlTiNHD

- ▲ AlTiN-based nanolayer hard material coating
- ▲ Maximum application temperature 500 °C

TiCN

- ▲ TiCN multilayer coating
- ▲ Maximum application temperature: 450 °C

TiN

- ▲ TiN coating
- ▲ Maximum application temperature: 450 °C

Thread milling cutters

CWX500

- ▲ Carbide, TiAlN-coated
- ▲ The universal carbide grade for almost all materials

Ti500

- ▲ TiAlN-coating
- ▲ Maximum application temperature: 500 °C

Circular milling cutters

CWX500

- ▲ Carbide, TiAlN-coated
- ▲ The universal carbide grade for almost all materials

Thread turning

CWK20

- ▲ Carbide, uncoated
- ▲ ISO | M10 | **K10** | **N10** | S10
- ▲ The wear-resistant carbide grade for machining aluminium and other non-ferrous metals

CCN20

- ▲ Carbide, TiAlN-coated
- ▲ ISO | **P20** | **M20** | **K20** | S20 | H20
- ▲ The all-round carbide grade for machining steels at low cutting speeds

CCN1525

- ▲ Carbide, TiN-coated
- ▲ ISO | **P25** | **M25** | **K25** | N25 | O25
- ▲ The coated carbide grade for machining steels and stainless steels at low cutting speeds

CCN2520

- ▲ Carbide, TiAlN-coated
- ▲ ISO | P25 | **M25** | K25 | **S25** | H25
- ▲ The coated carbide grade for the machining of stainless steels at medium to high cutting speeds

PROJECTS IN THE BEST OF HANDS

Smart solutions for efficient machining processes

Benefit from our innovative tool concepts, many years of experience and professional advice to increase your productivity. You can rely on us to implement your project successfully!
